

THE ULTIMATE

Protection.

WIRELESS COMMUNICATION BACKUP FOR YOUR SECURITY SYSTEM

YOU WANT THE ULTIMATE PROTECTION.

If you've already had an electronic security system installed in your home or business, you probably chose the finest available at the time. Smart move – according to the statistics, homes or businesses without security systems are 3 times more likely to be broken into than those that do. Now there's a way that can make your security system even more effective. It's called AlarmNet.

Phone lines are vulnerable

No doubt about it – a high quality, professionally installed security system is your best protection against burglary and fire. However, a security systems most important link – your telephone line – is also its most vulnerable one.

Until recently, it was a rare occurrence that a phone line would be tampered with to defeat a home security system. Unfortunately, as security system technology advanced, so did the sophistication of burglars. The severing of phone lines prior to breaking into a home is now an important concern. Other real threats include severe weather, construction and even routine maintenance to your phone lines.

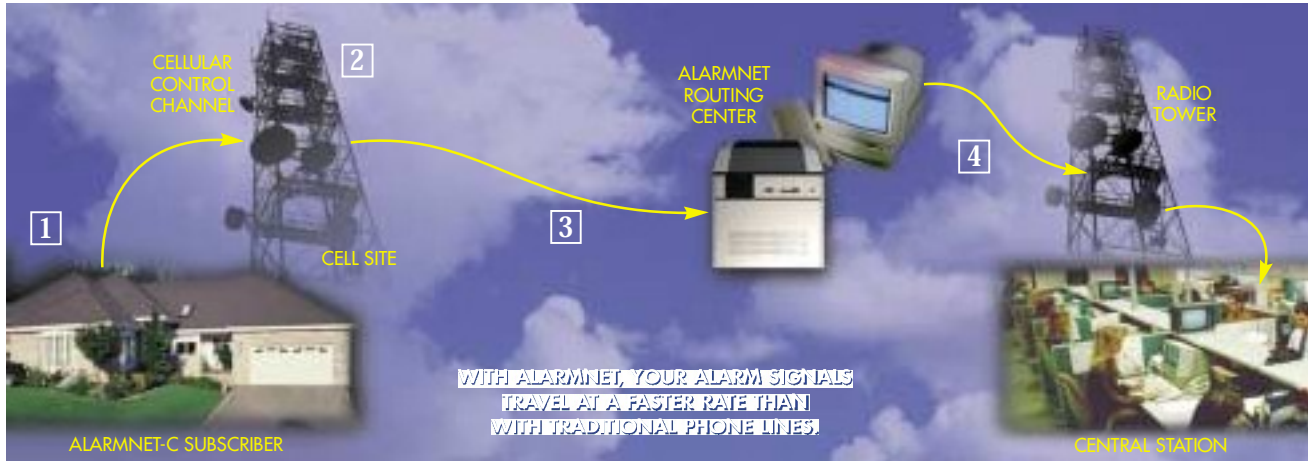

**ALARMNET IS YOUR
BEST DEFENSE WHEN
PHONE LINES FAIL**

AlarmNet is an exclusive, state-of-the-art alarm communication back-up service that works in tandem with your existing security system. The only equipment that AlarmNet requires is a small radio transmitter that connects easily to your security system's control panel. No modification to your security system is required.

AlarmNet availability was once determined by your home or businesses' geographic location. But now, AlarmNet has developed AlarmNet Control Channel Cellular, a new technology that has made it possible to extend coverage to your area.

- 1 In the event of an emergency, tampering or trouble with your phone lines, AlarmNet sends a signal, regardless of phone line status, to the powerful cellular control channel, using "MicroBurst" technology by Aeris Communications.
- 2 The cellular control channel is the fastest, most reliable channel available on the nationwide cellular network. Unlike cellular voice channels, there are no busy signals or interference to slow down your alarm signal. Also, there are no additional phone bills.
- 3 Using the backbone of the cellular network, your alarm signal is transported at remarkable speeds to AlarmNet's state-of-the art routing facility.
- 4 AlarmNet's routing facility sends your alarm signal to your Central Station where the appropriate authorities are notified.

ALARMNET CONTROL CHANNEL CELLULAR IN ACTION

Since AlarmNet is supervising your radio, you can rest easy knowing that AlarmNet will be there when you need it most.
